

BUSINESS PROBLEM

Understanding Order, Delivery, Satisfaction & Revenue Performance

This analysis examines how the e-commerce business is performing end-to-end: order volume, delivery efficiency, on-time performance, customer satisfaction, and how order status connects to revenue.

Order Volume

Delivery Efficiency

Customer Satisfaction

Revenue by Status

Business Opportunity: identify where delivery operations and customer experience can be improved while sustaining strong overall performance.

What We Analyzed, and How

ORDER-LEVEL DATA FIELDS

- Order ID & Customer ID
- Order Status
- Purchase Date
- Delivery Dates (actual & estimated)
- Delivery Days / Delivery Delay Days
- Late Order Indicator
- Payment Value & Number of Items
- Product Price & Freight
- Customer Review Score

DASHBOARD BUILT FOR MANAGEMENT

Detailed order data was converted into executive-ready metrics and visuals:

1

Executive KPI Summary

Orders, delivery time, delay, satisfaction at a glance

2

Orders by Status

Where every order currently stands

3

Avg. Delivery Days by Status

Speed compared across order types

4

Review Score Distribution

Shape of customer satisfaction

5

Revenue by Order Status

Where revenue is concentrated

KEY FINDINGS

What Management Should Know

99,441

Total Orders

Large, active order volume

12.56 days

Avg. Delivery Time

From purchase to customer

-11.18 days

Avg. Delivery Delay

Orders beat estimates on average

4.09 / 5

Avg. Review Score

Consistently positive feedback

DELIVERED ORDERS DOMINATE THE MIX

The order-status breakdown shows delivered orders as the largest single category by far — most orders placed by customers successfully reach them. This is the foundation the other findings build on: a business that fulfills reliably, with room to tighten the edges.

Delivery Performance Protects Satisfaction

The most important relationship in the data is between delivery performance and how customers rate their experience.

12.56 days

Average delivery time

4.09 / 5

Average review score

-11.18 days

Average delivery delay (early on average)

Delivered = largest status

Most orders complete successfully

MANAGEMENT INTERPRETATION

Delivery operations are generally effective — orders typically arrive, and customers respond well. This performance is an asset worth protecting, not a fact to take for granted.

WHY THIS MATTERS

- Customer satisfaction
- Repeat purchases
- Brand reputation
- Operational costs

Recommended Actions for Management

1

Monitor Late Orders Closely

Identify patterns behind late deliveries — by category, period, or bottleneck — and target avoidable delays.

2

Improve Delivery Monitoring

Track average delivery time, delay, and late-order rate on a regular cadence to catch problems early.

3

Maintain Customer Satisfaction

Protect the 4.09/5 baseline through reliable delivery, proactive communication, and fast issue resolution.

4

Analyze Order Statuses

Investigate cancelled, unavailable, and other incomplete statuses to improve fulfillment efficiency.

5

Use Revenue Insights

Monitor revenue by order status to understand which categories drive the business forward.

Since satisfaction is already strong, the priority is protecting it while tightening delivery consistency and reducing incomplete orders.

What Improves, and How We'll Know

OPERATIONAL

- Faster delivery performance
- Fewer late orders
- Better issue monitoring
- Improved order completion

CUSTOMER

- Higher satisfaction
- Better overall experience
- Increased customer trust
- More repeat purchases

FINANCIAL

- Improved revenue performance
- Lower delivery-related costs
- Clearer view of top categories

HOW SUCCESS WILL BE MEASURED

Avg. Delivery Days · Number of Late Orders · Late Order Rate · Avg. Review Score · Delivered Order % · Revenue by Status

What to Watch, and What Comes Next

LIMITATIONS

Limited customer-level analysis

No deep view of segments, repeat customers, or location

Limited product analysis

Best/worst performers and category effects not yet identified

Delivery delay needs further study

Underlying causes of timing variation aren't fully explained

NEXT STEPS

Customer Analysis

Repeat purchase behavior, segmentation, retention

Product Analysis

Best-selling products, product-level revenue, category delivery issues

Advanced Delivery Analysis

Causes of late orders, location comparisons, bottlenecks

Bottom line: 99,441 orders, a 12.56-day average delivery time, and a 4.09/5 review score show a business with real operational scale and positive customer sentiment. The opportunity is to tighten delivery consistency, reduce incomplete orders, and use status and revenue data to guide decisions.
